### Surface Area

The surface area of a three-dimensional object or solid is the sum of the areas of its outer surfaces. The surfaces that make up a polyhedron are polygons.

To find the surface area, you find the area of each side and then add these areas together.

Name the number of surfaces for each figure:

Measurement: Cubes and Cuboids  
Volume - Problem 11

At 9 am, Kate turned on the supply tap which dispensed water at a rate of 3 litres per minute to fill an empty rectangular container. At the same time, water began leaking out of the container at a rate of 0.5 litres per minute through its faulty tap. Kate turned off the supply tap when the container was filled to its capacity. Given that the container measured 20 cm by 25 cm, at what time was the container completely empty again?
